

DC-3 World Rally 2005 flight WR 05-03.

This flight is based on a valued suggestion from Mark Beaumont. The brief was, From Puerto Montt to 'anywhere'! After I finally! Located Puerto Montt the problem then was to create a flight.

My interpretation then is: - After take off the flight heads eastwards to climb over the mountains to intercept the river valley that passes by El Maiten airport.

We turn south and descend a little to over fly El Maiten airport before climbing ever higher to over fly Esquel airport before starting a gentle descent to our destination, which is Jose De San Martin.

Again I have done my best to make sure that a variation of navigation skills are required to accomplish the flight properly. I hope I have achieved that.

Have fun.

Don't forget to check fuel levels before departure.
