

### **Installing the .pln files for Little Navmap**

There are 10 .pln files supplied, one for each of the 10 flights. They are named in the format [WR2022\\_nn\\_P3D.pln](#) where nn is the flight number associated with the specific flight plan file.

The 10 .pln files should be copied from the WR2022\_Flight\_Plans\_P3D folder and pasted into the location where the user keeps their Little Navmap flight plans.

This is normally located at [C:\Users\Username\Documents\LittleNavmap plans](#).

To open the flight plan in Little Navmap select the following from the menu bar at the top of the screen:

#### **File**

##### **Open flight plan ...**

The WR2022 flight plans will be listed along with other flight plans you have in the same folder.

Due to varying scenery packages that may be installed on the user's system the altitude profile may differ slightly so care should be taken when deciding on the altitude for each leg of the route.

The flight plans, in conjunction with the flight descriptions, should enable users to plan their flights accordingly to account for winds, visibility, terrain and fuel.
