

Extracting and loading the Start-up Situation files in X-Plane

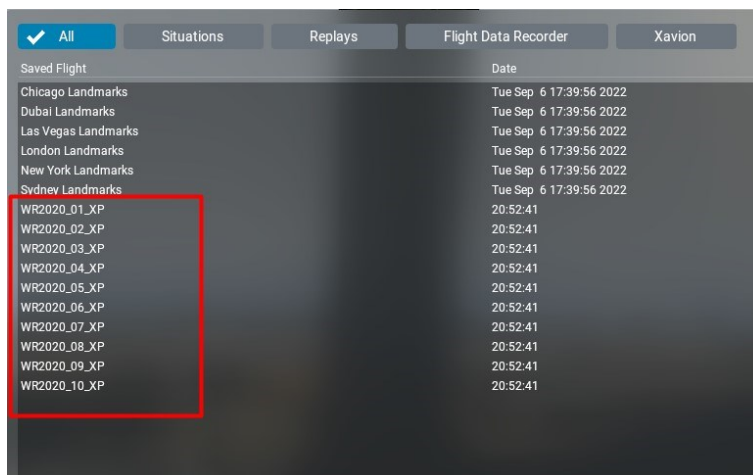

1. Extract the contents of the file 'WR2022_Flights_XP.zip' to your '.\X-Plane 12\Output\situations' folder.

2. To load a Start-up situation, in X-plane go to "File", then choose "Load Flight".

3. On the next tab, select your flight and press "Load Flight"

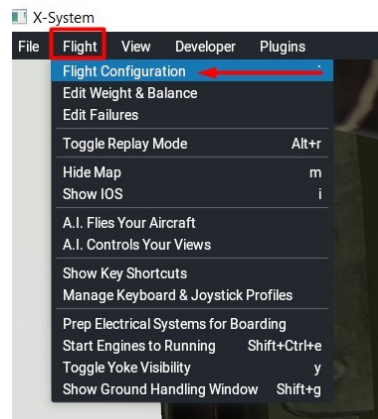

4. Your flight will be loaded at the correct airport on the active runway with the weather set for the flight.
5. Please read the Important Note on the next page.

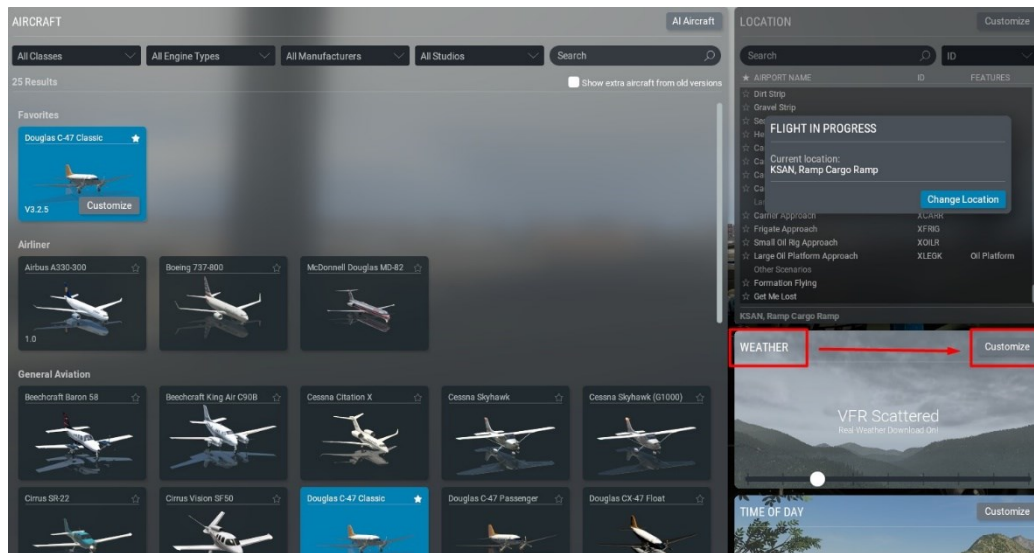

IMPORTANT NOTE TO X-PLANE USERS

The best practice is to set your **Weather** to “Customize” before you load the **Situation** file.

1. Go to “File”, then choose “Flight Configuration”

2. To the right, on “Weather” select “Customize”

3. On the next tab, left bottom in “Manual/Real Weather” select option “Manually Enter Weather”.
